GSA PBS CRE Presentation — First 20 Minutes

Slide Guide, Content, & Talk Track

Context: 2-hour meeting on June 25th. This covers the first 20 minutes — the CRE industry credentialing segment (what John called "Siri's section"). Goal: establish Salesforce as the CRE relationship platform, credential Rachel as an industry SME, and frame 4 core stories before the demo begins.

Narrative Arc for the 20 Minutes

The flow moves from **macro** → **micro** → **outcome**:

1. **Slide 1–2:** Set the CRE industry stage (market + disruption)
2. **Slide 3:** The operational reality — why the status quo is broken
3. **Slide 4:** Salesforce's positioning (not a replacement — an orchestration layer)
4. **Slides 5–8:** 4 outcome-based use case stories (no firm names on screen — let Rachel tell them verbally)

SLIDE 1: Title / Transition Into the CRE Section

Suggested Title

"The Future of Commercial Real Estate Is Already Here"

Visual Suggestion

Full-bleed image of a CRE skyline or brokerage floor. Clean. Minimal text.

Talk Track

"Before we get into the demo, I want to give you a little context on how we think about this industry — not just as a product company, but as a true partner to some of the world's largest commercial real estate firms. And I want to be direct: in no world would we walk into a CRE firm and say 'replace your niche, purpose-built technology with Salesforce.' That's not the

story. The story is: your cornerstone is relationships. Full stop. And we are the relationship platform. Full stop. We become the hub for your data and intelligence — so you unlock greater ROI from everything you're already doing."

SLIDE 2: The CRE Market Moment

Suggested Title

"Investor Confidence Is Up. The Gap Between Leaders and Laggards Is Widening."

Key Data Points (from CRE POV V2) 1

- 70% of investors planning for growth in 2025 asset acquisition
- 75% anticipating a rebound in investment activity
- 13% expected 10-year growth in PropTech impacting share of spend
- 500+ companies now provide AI-powered services to real estate

Visual Suggestion

2x2 or 4-stat callout grid. Simple, bold numbers. Possible sub-header: "The opportunity is massive — but so is the complexity."

Talk Track

"The market has real momentum. Investor confidence is up, asset acquisition is growing, and the PropTech space is exploding — over 500 companies now offer AI-powered services in this space alone. What that means for firms like GSA is that the gap between who's leveraging technology strategically and who isn't is growing fast. The leaders are separating. And the good news: you're having this conversation right now."

SLIDE 3: The Operational Reality — "Work Is Broken"

Suggested Title

"The Challenge: Fragmented Systems, Fragmented Results"

Key Stats (from CRE POV V2) 1

- 41% of work is spent on low-value tasks
- 47% of workers struggle to find information
- 11+ apps the average worker swivel-chairs between
- Up to \$4.4T in productivity value GenAI could unlock annually

Key Pain Points to Call Out (from industry pain points doc) 2

- "Document Soup" — A single lease cycle involves mountains of cross-referenced docs. Manual review is slow, expensive, and error-prone.

- **Siloed Data** — Property data is notoriously fragmented. Teams manually hunt across multiple platforms for answers.
- **Client Intelligence Gaps** — No centralized system. Teams click through 7+ different systems just to find a lease term.

Talk Track

"Here's what we hear consistently when we talk to CRE leaders. 41% of their people's time is going to low-value tasks. Workers are juggling over 11 different tools. And the data they need — lease terms, client history, property performance — is scattered across systems that don't talk to each other. One of our clients described it to me as 'document soup.' You know what's on the ingredients label, but good luck making sense of it quickly. The leaders we work with are solving for one thing: how do I get my teams out of the swivel chair and into strategic work?"

SLIDE 4: Salesforce's Position — The Orchestration Layer

Suggested Title

"We Don't Replace Your Stack. We Make Your Stack Work."

Visual Suggestion

Simple architecture diagram: Legacy systems / niche tools on the left → Salesforce platform in the center (Data Cloud, Agentforce, Slack, Tableau, MuleSoft) → Outcomes on the right (speed, intelligence, experience). Clean, not technical.

Core Positioning Points

- Salesforce as the **relationship platform** and central hub for data + intelligence
- Not rearchitecting — **orchestrating**
- MuleSoft connects existing systems (Databricks, legacy CRE tools, etc.) without rip-and-replace
- Agentforce = digital labor layer that amplifies human teams

Talk Track

"So here's how we fit in. We are not asking you to rearchitect your technology stack. We know how critical what you've built is. What we're saying is: let us be the connective tissue. Salesforce becomes the place where your data — from whatever systems it lives in — gets activated. Your people get the intelligence they need, in the flow of their work, without clicking through seven different screens. We call it orchestration. And when you add AI agents into that equation — digital labor working alongside your human teams — that's where the real unlock happens."

SLIDE 5: Story 1 — "Account Intelligence at Your Fingertips"

Suggested Title

"What If Every Broker Walked Into Every Meeting Fully Briefed?"

Use Case: Agentforce Account Briefing (based on Capital Markets/CBRE work)

- Broker needs instant intelligence on a client account before a call
- Instead of clicking through Engage, RCM, CoStar, and email threads — one conversational query
- Agentforce pulls structured + unstructured data and delivers a succinct, actionable one-pager
- "Who is this account, what are their key dates, what are the trends I should know about?"

Analogous Example (shareable publicly)

- RBC Wealth Management: **75% reduction in meeting prep time**, 48% increase in close rate — same pattern, different industry [1](#)
- CRE firms using Agentforce deal assistants generating **\$3.1M in annual value** from time savings alone

GSA Framing (talk to this verbally)

"In your world, imagine a GSA employee receives a space request from an agency they don't work with every day. Instead of pulling 7-year-old files and calling three colleagues, they ask: 'Summarize this agency's real estate profile.' They get occupancy history, active leases, key contacts, and relevant context — instantly. That's not a future state. That's what we're doing today."

Talk Track

"One of the core themes we see across leading CRE firms is this: brokers are drowning in data but starving for insight. One of the things I'm most excited about is what we've done with Agentforce to create what I call 'taxi cab intelligence' — the ability to get a full account briefing from conversational data, structured data, market data, all in seconds. You don't need to know where it lives. You just ask. One of our firms cut meeting prep time by 75%. Another quantified it at \$3.1 million in annual time savings just from this one use case."

SLIDE 6: Story 2 — "Slack as the Operating Layer"

Suggested Title

"What If Your Team Never Had to Log Into CRM Again?"

Use Case: Slack as Headless CRM / Broker Operating Platform (based on Cushman & Wakefield work)

- Brokers are mobile-first — they live in their phones, not in CRM tabs
- Slack becomes the experience layer: CRM data surfaces in Slack, agents respond in Slack, workflows run in Slack
- Broker can close a deal, update a record, get an alert — all without touching Salesforce directly
- "Slack is our preferred flavor of headless CRM"

Key Message for GSA Context

- GSA employees don't hate CRM — they've never had a great one. The goal isn't to get them to love logging in; it's to give them intelligence in the flow of their work.
- Slack as the collaboration layer driving team coordination across a distributed workforce

Qualitative Value (active pilot — no hard metrics yet, but speak to themes)

- Driving collaboration across mobile-first teams
- Reducing context switching (11+ apps → one hub)
- Agentforce in Slack = intelligence without friction

Talk Track

"Here's something that came out of Parker Conrad — literally the man who invented CRM. He said: 'What if you never had to log into CRM again?' And he meant it. Because the data is what matters. The interface of how you experience that data — that should bend to you, not the other way around. One of our leading firms is using Slack as the primary operating layer for their broker teams. CRM data flows into Slack. Agents respond in Slack. Workflows run in Slack. The broker never opens a CRM tab. And for your teams at GSA — who are coordinating across multiple agencies, multiple property portfolios — imagine having a single experience layer that brings all of that together."

SLIDE 7: Story 3 — "Unlock What's Already in Your Data"

Suggested Title

"The Data Is There. It Just Isn't Working for You Yet."

Use Case: Analytics + Tableau (CBRE Vantage Analytics / JLL)

- CBRE built **Vantage Analytics** entirely on Tableau — 500+ clients, 200+ source systems integrated, managing **8 billion square feet**
- JLL is one of Tableau Conference's most prominent power users — deeply invested in data products
- For GSA: they likely have significant data in Databricks + legacy systems that isn't being activated

Talking Points

- Salesforce + Tableau = analytics built into the workflow, not a separate BI tool you have to remember to open
- Data Cloud activates data from existing systems (zero-copy integration with Databricks, Snowflake, etc.) — no data migration required
- Real-time dashboards: occupancy trends, lease expirations, agency spend, space utilization

Talk Track

"CBRE created a product called Vantage Analytics that they now sell to their own clients. It manages 8 billion square feet of data, integrates over 200 source systems. It's entirely powered by Tableau. JLL is the same story — they're one of the most prominent Tableau users at their annual conference. The point isn't 'look what they did.' The point is: the data infrastructure they had wasn't fully activated until they brought in the right analytics layer. And from what I understand, there's a real opportunity here at GSA to get dramatically more out of the data that already exists — without needing to build from scratch."

SLIDE 8: Story 4 — "Document Intelligence That Actually Works"

Suggested Title

"98% Accuracy. From Hours to Minutes. That's What AI Does to Lease Documents."

Use Case: IDP – Intelligent Document Processing (Cushman & Wakefield POC) 3

- Cushman & Wakefield IDP POC: 98% success rate on lease field mapping
- A 100-page lease → critical fields extracted in under 10 minutes (rent escalations, maintenance liabilities, renewal deadlines)
- Applied to GSA: RFP intake automation, routing, document dissemination — no more manual system-to-system movement

The "1 Million Hours" Frame

- GSA has a macro goal: 1 million hours saved in 12 months — 400,000 hours saved to date
- IDP + Regrello (agentic process automation) directly address the manual "document soup" workflows that represent significant untapped hours
- Frame this as: "You're probably sitting on millions of dollars of automation opportunity"

Talk Track

"The last story — and this one is particularly relevant given your 1 million hour savings goal — is document intelligence. In CRE, documents are everything. Leases, contracts, RFPs, compliance filings. One of our clients achieved a 98% success rate mapping lease fields with our IDP solution — reducing what used to take days to under 10 minutes. For GSA, think about the RFP lifecycle: someone gets an email, logs into a system, downloads the RFP, disseminates it manually, collects responses, re-uploads. Every single one of those handoffs is an automation opportunity. And when you're trying to save a million hours — that's where it starts."

 Slide Order Summary

	Slide Title	Duration
1	The Future of CRE Is Already Here (transition)	1 min
2	Market Moment — Confidence Up, Stakes Higher	3 min
3	The Challenge: Fragmented Systems	3 min
4	Salesforce: The Orchestration Layer	3 min

5	Story 1: Account Intelligence / Agentforce	2.5 min
6	Story 2: Slack as Operating Layer	2.5 min
7	Story 3: Analytics — Unlock Existing Data	2.5 min
8	Story 4: IDP — Document Intelligence	2.5 min

Total: ~20 minutes 

Key Assets to Pull Slides From

- Commercial Real Estate POV V2 (FY26) — Slides 5–11 for market stats; Slide 18 for the 40+ use cases visual; Slide 43 for unified solution architecture
- Cushman & Wakefield IDP POV — IDP story + 98% accuracy stat
- Slack for Commercial Real Estate POV — Slack operating layer narrative
- CRE POV: Age of Innovation — Stockland / industry header slide
- CBRE Vantage Analytics: public-facing at cbre.com — screenshot for Tableau/analytics story

Notes for the Room

Don't lead with firm names on slides. John agreed: tell the story by use case + outcome, not "here's what CBRE and JLL are doing." Name them verbally in context as validation, not as the headline.

The Slack broker pilot: Active, no public metrics yet. Speak to it qualitatively — driving collaboration, mobile-first experience, reducing context switching. John confirmed: "Yeah, cool. Yes."

Data Cloud / Zero Copy: Ibrahim flagged that Gov Cloud parity is a known gap. Be ready to say "here's how it works at commercial firms with Snowflake/Databricks — defer specific Gov Cloud parity questions to the account SE." Don't go deep here unprompted.

The 1 million hours goal: Use as a north star frame throughout — especially for IDP and Regrello automation stories. GSA has saved 400K hours to date. Salesforce can materially accelerate the remaining 600K.
