

CONFIDENTIAL · INTERNAL USE ONLY · DISTINGUISHED SE BRIEF

Service Logic FSM SE Playbook

How to Respond. How to Demo. How to Win.

ACCOUNT	Q&A DEADLINE
Service Logic (Bain Capital Portfolio)	June 9, 2026

PROPOSAL DUE	DEMO WINDOW
July 2, 2026 · 5PM ET	July 13–16, 2026

Part 1 — RFP Response Guide · Part 2 — Demo Strategy Guide	Service Logic FSM · Salesforce SE Strategy
--	--

PART ONE

How to Respond

Strategy, narrative, and section-by-section guidance for the written RFP submission due July 2.

Section 1 — The Frame & Win Themes

Before you write a word

Section 2 — The Landmines

Six risks with specific written answers

Section 3 — Section-by-Section Strategy

Eight response sections, how to approach each

Section 4 — Q&A Window Strategy

Six questions to submit before June 9

Section 5 — ISV Partners & Submission Checklist

What must be named, what must be included

SECTION 1

Before You Write a Word — The Frame

This is not a feature evaluation. This is a **PE-backed portfolio company preparing for a Bain Capital exit**. Every section of your response should answer one question: **"Why does Salesforce make Service Logic more valuable for IPO or acquisition?"**

The ServiceMax Problem — Address It Directly

Service Logic previously evaluated ServiceMax (a Salesforce product) and rejected it for item-level inventory limitations and ASC 606 gaps. Every evaluator knows this. Your response must explicitly acknowledge this and explain what is different about Salesforce Field Service. Silence reads as confirmation of the same gaps.

The Three Win Themes — Thread These Throughout Every Section

1

Already Inside the House

Salesforce is Service Logic's CRM standard. The integration between FSM and CRM isn't a future project — it already exists. No other vendor in this RFP can say this. The 24-48 hour delay from deal close to project setup goes to zero.

"We're not a new vendor. We're an expansion of what you already trust."

2

Built for Commercial Complexity — Not Residential

ServiceTitan was built for residential HVAC and struggles with commercial, union, and multi-entity at this scale — the RFP says this explicitly. Salesforce Field Service was designed for enterprise-scale, multi-entity field operations. This is the differentiation that matters most.

"ServiceTitan is a great residential tool. You're not a residential business."

3

The Only IPO-Ready Platform

Bain needs SOX controls, ASC 606 revenue recognition, immutable audit trails, board-level dashboards, and CMEK encryption. Salesforce Shield + Tableau + Hyperforce is the only FSM proposal that a CFO, auditor, and investment banker will all recognize and trust.

"Your auditors will recognize this platform. Your bankers will too."

What They Evaluate — The Scoring Model

Every requirement must be answered with one of these response codes. Evaluators score based on how many "Must" requirements you deliver as OOB or CONFIG. CUSTOM and GAP are red flags.

CODE	WHAT IT MEANS	YOUR GOAL
OOB	Works out of the box, no configuration needed	Use wherever true — highest-scoring answer
CONFIG	Supported through configuration (no code)	Acceptable for most Must requirements
EXTENSION	Requires platform tools but no custom code	Use carefully — implies additional effort
CUSTOM	Requires custom development — must include hours estimate	Avoid on Must requirements; signals risk
PARTNER	Delivered via named AppExchange partner	Acceptable — but must name a specific partner, not "available via partners"
ROADMAP	Not available now, but committed to a GA date	Only use with a real committed date — vague answers score poorly
GAP	Cannot deliver this requirement	Never leave a Must requirement as GAP without a mitigation plan

SECTION 2

The Landmines — And How to Defuse Them

These are the six requirements where Salesforce is most exposed. Each one needs a specific, confident written answer — not a hedge.

RISK	THE PROBLEM	YOUR WRITTEN ANSWER
HIGH Single-Tenant Requirement	They say multi-tenant SaaS where customer data co-mingles is a disqualifier. Salesforce runs multi-tenant by default.	Respond with Hyperforce dedicated deployment . Get written contractual commitment on tenant isolation. Confirm SOC 2 Type II covers this configuration. Needs legal/product sign-off before July 2.
HIGH AIA Billing (G702/G703)	Construction billing format must be "native" (OOB or CONFIG). Salesforce FSL does not do this natively.	Respond as PARTNER — name a specific AppExchange ISV. Must include a named partner and high-level implementation commitment. Do not leave as TBD.
HIGH Union / CBA Compliance	Davis-Bacon prevailing wage, apprentice ratios, certified payroll (WH-347) — all Must requirements where FSL is not known for depth.	Respond as PARTNER with a named union labor compliance ISV. Clarify which CBA rules FSL handles natively vs. partner. Be honest — a credible mitigation is better than a bluff.
HIGH ServiceMax Was Rejected	They evaluated a Salesforce FSM product and said no. Your credibility depends on how you handle this.	Dedicate a full page in your response to this. Title it "Salesforce Field Service vs. ServiceMax — What Changed." Cover: different product architecture, different inventory model, ASC 606 handling. Be factual and direct.
MEDIUM Customer-Managed Encryption Keys	CMEK is a Must for SOX/IPO. Needs to work in the Hyperforce deployment model.	Respond as OOB via Salesforce Shield — confirm CMEK availability on Hyperforce dedicated. Include documentation reference.
MEDIUM 6-8 Week Onboarding Target	Aggressive for a Salesforce implementation. They know this.	Respond with a wave-based model : OpCo template + configuration playbook = repeatable. Show the model, not just the timeline. Use a reference customer if possible.

SECTION 3

Section-by-Section Response Strategy

How to Structure Each Section of the Response

The RFP response template (Excel + PowerPoint) has defined sections. Here is the strategic approach for each one.

1 **Company Overview — Lead with Scale and Stability**

Bain's PE procurement team will scrutinize financial stability. Lead with Salesforce's revenue, customer count, and Fortune 500 base. Include audited financials or a clear reference. This is a credibility section, not a marketing section.

2 **Product Capabilities — Use the MoSCoW Response Matrix**

For every Must requirement, answer OOB or CONFIG first, then explain in one sentence how it works. For PARTNER responses, name the partner immediately. For CUSTOM responses, include a high-level LOE estimate. Never leave a Must requirement unanswered or vague.

3 **Multi-Entity Architecture — This Is Your Differentiator**

Spend more words here than anywhere else. Show that Salesforce's configuration model (not custom code) means each OpCo gets stood up from a template. Show the hierarchy: Global Config → Regional Override → OpCo-level settings. This is the architecture that makes the 6-8 week playbook credible.

4 **Mobile — Prove It Is Native**

The RFP explicitly disqualifies PWA/web-wrapper apps. State clearly: Salesforce Field Service Mobile is a native iOS (App Store) and native Android (Google Play) application. Then specifically address offline sync speed, biometric auth, MDM enrollment, and certificate pinning. Verify each against your product team before writing this section.

5 **Security and Compliance — Connect Every Dot to IPO Readiness**

This section is evaluated by someone preparing for a public company audit. For every SOX/security requirement, name the specific Salesforce feature: Shield for audit trail and CMEK, Hyperforce for data residency, SCIM 2.0 for deprovisioning SLA, MFA enforcement, SOC 2 Type II certification. Frame every answer in terms of audit and board readiness.

6 Implementation — Show the Acquisition Flywheel

Include a visual of what happens when Service Logic acquires Company #61: data migration template → configuration playbook → UAT → go-live → consolidated dashboard. Partner with a named SI who has HVAC and multi-entity experience. The partner selection is as important as the product here.

7 References — Match the Profile Exactly

They want three references with comparable scale and complexity: multi-entity, HVAC or mechanical services, union labor, and/or PE-backed. If you cannot match all four criteria, prioritize multi-entity + PE-backed. A mismatched reference works against you.

8 Pricing — Model It for Their Reality

They have 3,500+ users across 40+ entities. Include per-role pricing, volume discounts, and per-OpCo onboarding costs. Address data portability explicitly: they have a non-negotiable right to export all data at any time at no cost. Include this in your MSA terms.

SECTION 4

Q&A Window Strategy — Deadline June 9

This window closes June 9th — 6 days away.

The Q&A window is not just for clarification. It is an opportunity to shape the evaluation criteria in your favor. Every vendor gets the same answers — but you choose which questions get asked. Submit questions that force specificity on areas where Salesforce is strong and competitors are weak.

Questions to Submit — And Why

QUESTION TO SUBMIT	WHY IT HELPS SALESFORCE
"Please describe the expected integration model for OpCos that already use Salesforce CRM. Should vendors assume a unified Salesforce platform or a point-to-point integration?"	Forces acknowledgment that Salesforce is the CRM standard. Shapes scoring to favor unified platform approaches — where only Salesforce can win.
"For the single-tenant deployment requirement (ENT-020), will vendors be permitted to address this through dedicated infrastructure within a hyperscale cloud provider (e.g., dedicated Hyperforce region), or is a fully self-hosted on-premises deployment required?"	Opens the door for Hyperforce as a compliant answer. Without this clarification, evaluators may default to "Salesforce is multi-tenant — disqualified."
"For AIA billing (G702/G703), will a certified AppExchange ISV partner solution be acceptable as a CONFIG response, or must this be built into the FSM platform's core product?"	Confirms PARTNER is a valid response code here. Prevents a GAP ruling based on strict "native" interpretation.
"Please confirm whether the 6-8 week onboarding target applies to all OpCo types equally, or whether more complex OpCos (e.g., those with project billing, union labor, and legacy ERP integrations) have an extended timeline."	Creates space for a realistic implementation story. Prevents competitors from winning on an unrealistic timeline promise.
"Will proposals that include a combined FSM + CRM solution on a single platform be evaluated differently from proposals where FSM and CRM are separate vendor relationships?"	Directly invites the combined platform conversation. Forces evaluators to consider the integration cost and risk of multi-vendor approaches.
"For vendors who have previously evaluated related product lines (e.g., ServiceMax) and addressed documented gaps in a newer product, is there a mechanism to distinguish between the two in the evaluation?"	Gives evaluators a framework to separate ServiceMax from Salesforce Field Service — and gives your response a place to tell that story.

What to Include in Every Question

- Reference the specific requirement number (e.g., ENT-020)
- Keep questions factual and neutral — not leading
- One clarification per question — don't bundle
- Submit all questions in a single email by June 9

What to Avoid

- Questions that reveal your gaps before you've addressed them
- Anything that sounds like negotiating requirements
- Contacting anyone at Service Logic except FSM-RFP@ServiceLogic.com
- Verbal follow-up — everything must be in writing

SECTION 5

ISV Partner Strategy + Submission Checklist

ISV Partners — The Two You Must Name

The RFP requires a specific named partner for any PARTNER-coded response. Vague answers like "available via AppExchange partners" score as GAP. You need two named partners before July 2.

GAP	WHAT YOU NEED	WHERE TO LOOK
AIA Billing G702/G703 construction invoicing	An AppExchange ISV with native AIA billing that integrates with Salesforce FSL. Must include a reference customer in construction or mechanical services.	AppExchange: "AIA billing" or "construction billing." Also check: Conga, Procore connector, Textura, or construction-specialized SIs.
Union/CBA Compliance Prevailing wage, certified payroll (WH-347), Davis- Bacon	A labor compliance ISV or payroll integration partner that handles CBA rate libraries, apprentice ratio enforcement, and certified payroll reports on the Salesforce platform.	AppExchange: "prevailing wage" or "certified payroll." Also check: LCP Tracker, Greenfield, or specialist labor compliance vendors with Salesforce connectors.

Strategic Move: Bring Your SI Partner to the Proposal

Service Logic will evaluate implementation partners as closely as the product. Name a specific Salesforce SI partner who has (1) HVAC or mechanical services experience, (2) multi-entity implementation experience, and (3) ideally a PE-backed rollup deployment in their portfolio. The partner's track record carries as much weight as Salesforce's product capabilities at this scale.

Final Submission Checklist

The RFP requires Excel + PowerPoint format.

ITEM	FORMAT	STATUS
Completed requirement response matrix (every requirement coded)	Excel	Required
Company overview + financial stability documentation	PowerPoint + Attachment	Required
Product overview + technology architecture	PowerPoint	Required
Multi-entity deployment architecture diagram	PowerPoint	Strongly recommended
Implementation methodology + wave onboarding model	PowerPoint	Required
"Salesforce Field Service vs. ServiceMax" differentiation page	PowerPoint	Critical — do not skip
Named ISV partners for AIA billing and union/CBA (with letters of intent)	PowerPoint + Attachments	Required for PARTNER responses
Three customer references (comparable scale + complexity)	Excel + Reference letters	Required
SOC 2 Type II certification (current)	Attachment	Required
Hyperforce / single-tenant deployment attestation	Attachment or written confirmation	Required — get from legal/product
18-month product roadmap	PowerPoint	Required
Pricing model by role type + volume discounts	Excel	Required
MSA / DPA / SLA draft terms	Attachment	Required
Data portability commitment (no cost, no vendor assistance required)	In MSA or written confirmation	Required — non-negotiable PE requirement

The bottom line on the written response: Every other vendor will answer the feature checklist. You need to answer the feature checklist **and** tell a story about what Service Logic looks like in 3 years — unified, IPO-ready, and on one platform. That story is only credible coming from Salesforce.

PART TWO

How to Demo

Scripted scenarios, wow moments, objection handling, and strategic plays for the demo window July 13–16.

Section 1 — Demo Philosophy

Who's in the room and what wins them

Section 2 — The Four Scenarios

Script, narration, and wow moments for each

Section 3 — The Hard Questions

Six objections answered word-for-word

Section 4 — Setup, Team & Strategic Plays

Demo environment, roles, and three plays that win

SECTION 1

Demo Philosophy — What Wins This Room

The demo is **scripted by Service Logic** — they will hand you specific use case scenarios. You do not control the script. What you control is **how you narrate it, what you highlight, and how you handle the hard questions**. Those three things win the room.

Who Is In The Room

Assume a mixed audience. Each group needs to leave the demo feeling something different.

PERSON IN THE ROOM	WHAT THEY NEED TO FEEL AFTER THE DEMO	HOW TO GIVE IT TO THEM
IT / Technical Evaluator	"This platform won't break in 3 years."	Show multi-entity config, API architecture, Hyperforce, MDM integration. Speak to scalability with numbers.
Operations / Dispatch Leader	"My team will actually use this."	Show the dispatch board. Show the mobile app working offline. Let them see the technician experience is genuinely good.
Finance / CFO Proxy	"This closes our billing lag and makes us audit-ready."	Demo the work-order-to-invoice flow. Show the 15-30 day lag becoming same-day. Show the Tableau IPO dashboard.
Bain / PE Operating Partner	"This makes our portfolio more valuable."	Show the acquisition onboarding playbook. Show cross-OpCo KPI benchmarking. Connect every feature to enterprise value.

Demo Structure — 4 Required Scenarios

Service Logic defined four scripted scenarios in the RFP. Your entire demo must cover all four.

T&M

The Hook — First 2 Minutes Are Everything

Open with their pain, not your product. Suggested opening: *"Today you're managing 60 companies on 15 different systems. Your average billing lag is 15-30 days. Only 7% of your equipment is tracked digitally. We're going to show you what it looks like when those numbers change — and when every company you acquire is live in 6 weeks instead of 6 months."* Then go into the demo. Do not start with a company overview slide.

SECTION 2

The Four Demo Scenarios — Script & Wow Moments

Scenario 1 — Opportunity Management		~15 minutes
WHAT THEY WANT	Pipeline visibility, field-generated opportunities, converting an opportunity to a customer record, RBAC configuration and guardrails.	
YOUR NARRATIVE	A field technician identifies upsell potential on-site. They log it on mobile. It flows instantly into the Salesforce CRM pipeline — no re-keying, no 24-48 hour delay, no lost opportunity . The account manager sees it the moment it's submitted. WOW MOMENT	
WOW MOMENT	Field opportunity on mobile → live in CRM pipeline → converting to a project with all customer data pre-populated. Zero re-entry. This is the "24-48 hour delay goes to zero" moment. Make it visible in real time.	
RBAC DEMO	Show a branch manager seeing their OpCo's pipeline but not another OpCo's. Show a technician creating an opportunity but unable to approve a discount. This speaks directly to SOX segregation of duties — name it explicitly for the finance audience.	
WATCH OUT	RISK Don't spend more than 15 minutes here. Opportunity management is table stakes. Move confidently to Service / T&M, which is where their biggest operational pain lives.	

Scenario 2 — Service / T&M (Time & Materials)

~20 minutes

WHAT THEY WANT	Full intake-to-billing lifecycle: manual and automated scheduling, mobile offline access , time tracking, field quoting, invoice generation.
YOUR NARRATIVE	Emergency HVAC failure at a commercial building. CSR creates a work order in under 60 seconds. Einstein dispatch assigns the nearest qualified technician. Tech drives into a no-signal zone — the app keeps working . On-site: photo capture, quote, signature, work order complete → invoice triggered automatically. WOW MOMENT
WOW MOMENT 1	The offline demo. Put the device in airplane mode. Complete the work order, capture the photo, get the signature — all offline. Restore connectivity. Everything syncs in under 60 seconds. This is the single biggest technician complaint they have. Make it visceral.
WOW MOMENT 2	Work order complete → invoice generated. Show the moment the tech closes the work order and an invoice is automatically created, GL-coded, and ready to send. Say it out loud: "Your current process takes 15-30 days. That just took 3 seconds." Then pause.
FIELD QUOTING	Show the technician generating a quote on-site from a template. Quote converts to a work order — no re-keying. Approval threshold alert fires when quote exceeds NTE. The RFP calls this a "significant volume driver."
WATCH OUT	RISK They will ask if this is a native app or web wrapper. Have the App Store page ready. The RFP explicitly disqualifies PWA/web-wrapper — be ready to prove native before they ask.

Scenario 3 — Preventive Maintenance

~15 minutes

WHAT THEY WANT	Recurring contract setup, scheduled work order auto-generation, aligned billing. Only 20% of OpCos have automated PM job creation today.
YOUR NARRATIVE	A commercial school district: one parent contract, 38 child site agreements. Every PM work order generates automatically. Every contract renews with a 3% escalator. No manual intervention. WOW MOMENT
WOW MOMENT	Show the parent-child contract structure, then auto-generation of PM work orders from the schedule — no dispatcher manually creating them. Show the PM completion dashboard across all 38 sites. This speaks directly to their \$300M recurring PM revenue base.
AUTO-RENEWAL	Show an evergreen contract auto-renewing with a configurable escalator. Connect to finance: "Your PM contract revenue is your most predictable income. This protects and grows it automatically."
WATCH OUT	RISK Keep this tight. PM is important but not the most complex scenario. Move confidently to Project-Based Work — highest scoring weight, most evaluator fear.

Scenario 4 — Project-Based Work

~20 minutes · Highest Stakes Scenario

WHAT THEY WANT	POC revenue tracking, mass PO management (lump-sum — NOT item-level), WIP management, AIA billing (G702/G703).
YOUR NARRATIVE	A \$2.5M commercial HVAC installation at a hospital. Multi-phase WBS, union labor across two trades, lump-sum POs, monthly AIA progress billings, finance watching margin in real time. This is the scenario that separates enterprise FSM from residential tools.
WOW MOMENT 1	Lump-sum PO. Create a PO: "Qty 1 — Mechanical rough-in materials — \$85,000." Do not show item-level line items. This is the exact reason ServiceMax was rejected. Anyone who remembers that evaluation will register this moment immediately. WOW MOMENT
WOW MOMENT 2	Real-time margin on the board dashboard. Actual vs. budget updating live. WIP schedule with variance. Rolling up to the Tableau executive view. Say it: "This is what your CFO sees. This is what the Bain operating partner sees. This is IPO-readiness." WOW MOMENT
AIA BILLING	If showing via ISV: transition confidently — "For AIA G702/G703 billing, we integrate with [Partner Name]. Let me show you how that looks." Don't apologize — frame it as best-of-breed. Show the generated pay application and the draft/pencil approval workflow.
WATCH OUT	RISK Most likely scenario for the ServiceMax comparison to surface. Be ready. If union labor is shown via partner, don't demo live if not fully configured — describe it with a reference instead.

SECTION 3

The Hard Questions — And How to Answer Them

These are the questions most likely to come up during or after the demo. Every person on the demo team should know these answers before walking in the room.

"You're the same company that makes ServiceMax. We evaluated ServiceMax and it didn't meet our needs. Why is this different?"

Answer directly, not defensively. "You're right that both are Salesforce products, and we appreciate you raising it directly. ServiceMax and Salesforce Field Service are built on different architectures for different markets. ServiceMax was designed for asset-heavy industries with item-level inventory models. Salesforce Field Service was built for service-centric businesses — commercial HVAC, mechanical services, multi-entity operations at scale. The lump-sum PO model you just saw, the multi-entity configuration architecture, the native mobile offline capability — none of those existed in the ServiceMax evaluation. We'd welcome the chance to map your documented ServiceMax gaps to what you just saw today."

"Is that a native app or a web app wrapped in a native shell?"

Pull up the App Store listing. "This is the Salesforce Field Service mobile app — available on the Apple App Store and Google Play Store as a native application. Not a PWA, not a web wrapper. We can show you the App Store page right now. The offline capability you saw — syncing 500 transactions in under 60 seconds — is only possible with a native app architecture."

"Salesforce is a multi-tenant platform. We require single-tenant deployment. Aren't we disqualified?"

Address with Hyperforce. "Salesforce Hyperforce supports dedicated deployment configurations with full tenant isolation, US data residency guarantees, and SOC 2 Type II attestation. We can provide contractual confirmation of the tenant topology specific to your deployment. We've submitted a Q&A question on this requirement precisely so we can give you a formal written answer before the proposal deadline."

"How does AIA billing actually work? Is it native or a third party?"

Be honest and confident. "AIA G702/G703 billing is delivered through [Partner Name], a certified Salesforce AppExchange partner with [X] implementations in commercial construction and mechanical services. Your project managers work entirely within the Salesforce platform — the AIA pay applications are generated within their workflow. We've included a committed SOW from [Partner Name] in our proposal. Would it be valuable to have their team join our follow-up discussion?"

"Can you realistically onboard one of our OpCos in 6-8 weeks?"

Be realistic and show the model. "The 6-8 week target is achievable for standard service OpCos using our pre-configured template — and we have references who have done it. For OpCos with project billing, union labor, and legacy ERP integrations, the realistic timeline is 10-14 weeks. What makes the model work is the template architecture — every new acquisition starts from a pre-built, pre-tested configuration, not a blank slate. We're happy to show you exactly what that playbook looks like for your most complex OpCo profile."

"How do you handle our union CBA requirements — prevailing wage, apprentice ratios, certified payroll?"

Name the partner, don't bluff. "Union labor compliance at the depth you require — Davis-Bacon, CBA rate libraries by work location, apprentice ratio enforcement, WH-347 certified payroll — is delivered through [Partner Name], which has deep expertise in the mechanical services trades. We're not going to tell you Salesforce FSL handles all of this natively, because it doesn't to the depth your requirements specify. What we can show you is exactly where the platform handles it and where the partner layer picks up — with no gaps in your workflow."

SECTION 4

Demo Setup, Team, & Strategic Plays

Demo Environment Checklist

Data to Pre-Load in Demo Org

- Service Logic branding (logo, colors) in the UI
- 3-4 sample OpCos with distinct names and branding
- Sample technicians with skills, certifications, union affiliations
- A school district parent contract with 5+ child sites
- An in-progress \$2M+ construction project with real WIP data
- A dispatch board with 8-10 active technicians on a live map
- A Tableau dashboard showing cross-OpCo KPIs
- Sample invoices auto-generated from closed work orders

Technical Setup to Verify

- Mobile device with FSL app installed (iOS preferred for display)
- Demo device fully charged, tested in airplane mode
- Backup laptop with demo org already loaded
- Screen share tested at venue resolution
- Two presenters minimum: one driving, one narrating
- ISV partner on standby (video call) for AIA/union questions
- App Store page loaded and ready to show on demand

The Three Strategic Plays for Demo Day

Play 1 — Name the ServiceMax Elephant Before They Do

In your opening 2 minutes, say it yourself: "We know you've previously evaluated ServiceMax. We're going to address that directly today." Then show the lump-sum PO in Scenario 4 and let the product speak. Taking control of this narrative is more powerful than waiting to be challenged on it.

Play 2 — The Acquisition Flywheel Close

In your closing 5 minutes, show a single slide: "Here is what Company #61 looks like on day one after acquisition." Data migration template → configuration playbook → go-live → immediately visible on the corporate KPI dashboard. Ask the PE/operating team: "How much faster does your M&A thesis work when integration takes weeks instead of quarters?"

Play 3 — Leave Them With a Question, Not a Summary

End the Q&A with: "We've shown you what Service Logic looks like on Salesforce. The question we'd like to leave you with is: which of your OpCos would you want to go live first — and what would it mean for your business if they were running on this platform 60 days from now?" This shifts the conversation from evaluation to implementation. It assumes the win.

Demo Team Roles

ROLE	RESPONSIBILITY	WHO SHOULD FILL IT
Executive Sponsor	Opens with the business narrative. Speaks to Bain/PE audience. Closes with the acquisition flywheel.	AE or VP-level — someone who can speak to Salesforce's partnership model and financial commitment
Solution Engineer (You)	Drives the product demo. Narrates each scenario. Handles technical objections in the room.	Distinguished SE — with the full context from this playbook
ISV Partner Rep	Available for AIA billing and union/CBA questions. Can present their portion of Scenario 4 if pre-arranged.	Named ISV partner — ideally on-site or on standby video call
Implementation Partner Rep	Speaks to the onboarding playbook, wave model, and reference customers. Owns the "can you really do 6-8 weeks?" answer.	Named SI partner — credibility comes from their track record, not Salesforce's

The demo win condition: When the operations leader leans over to the IT leader and says "I want this" — that's the moment. Everything else is mechanics. Make the technician offline experience and the work-order-to-invoice moment so visceral that the operations audience can't imagine going back to what they have today.
